The first generation of ECG smart TVs

We present to you the first generation of ECG smart TVs, which really have a lot to offer you. The perfect proof of this is the **ECG 24 HS01T2S2** television, which despite its diagonal of only 24 inches (61 cm), offers a complete range of applications commonly available on much larger and more expensive models.

Thanks to its compact dimensions, you can use its rich offer, for example, at a cottage, in smaller apartments and studios or in student dormitories. You will have a lot of fun with it in all these places. You also have full-fledged **smart functions** available, including popular streaming applications and an open Internet browser. In short, it is a television through which you can access audiovisual content that is exactly to your taste at any time.

In addition to modern functions, the television will also inspire you with its timeless design with a classic black frame and a stable central stand. This makes it a great fit for any interior. Choose whether you want to have the TV on a stand or hang it on the wall. TV mounts with the VESA 100×100 standard are suitable for this model.

Operating system and favorite applications

The **Linux** operating system offers a comfortable user environment. It includes a number of the most popular smart applications. You can look forward to thousands of videos from the **YouTube** server, popular films and series from **Netflix** and audiovisual content from the Amazon Prime Video service.

To use all the functions of the device, you need to connect the smart TV to the Internet. This can be done in two ways - the ECG 24 HS01T2S2 can communicate with wireless **Wi-Fi** networks and also supports a classic wired connection (using the RJ45/LAN connector).

DVB-T2 is a given

In addition to web streaming services and other smart gadgets, this TV can of course also handle the reception of classic broadcasts. It is compatible with the **DVB-T2** standards (including H.265/HEVC encoding), DVB-S2 and DVB-C. This means you can watch terrestrial, satellite and cable broadcasts on it.

Sharp image and quality sound

When watching your favorite movies, series or sports matches, you will experience **high-quality picture and sound** with the ECG 24 HS01T2S2 television. The device works with HD resolution (1366×768 px) and is equipped with built-in stereo speakers with a power of 2× 3 W.

With the red button you can access additional content

Because this TV also supports modern **HbbTV technology**, you can also access online archives of individual TV stations through it - just press the **red button**. In addition, there are other interesting keys on the remote control - for example, those that allow you to access the popular services YouTube and Netflix with a single press.

Easy connection via USB and HDMI

The ECG 24 HS01T2S2 smart TV also features a pair of **USB 2.0 ports**. Thanks to them, you can watch movies on the TV screen or listen to your favorite music from a flash drive or external disk.

Of course, the device's connectors also include an **HDMI 2.0** interface (3 ports), through which you can connect a laptop, soundbar or game console to the TV. You will also find a classic headphone output here. You can plug in headphones and watch TV without disturbing anyone.

Of course, there is a **CI** (Common Interface) interface designed for using a pay TV module. These services are provided by satellite or cable operators, from whom you can also obtain a smart card.
