For perfectly whipped milk froth

Do you love coffee and coffee drinks with milk? The specific aroma of coffee is really intoxicating and you will hardly find anyone around you who would disagree. You can also prepare different types of coffee milk beverages at home and you don't even have to go to a café. You can make the favourites **cappuccino or macchiato** in the comfort of your own home.

The **ECG NM 119** milk frother, which conjures up velvety milk froth in less than 2 minutes will be an excellent helper in this case. Once you try it, you won't be able to do without it.

Cappuccino ready in a moment

The ECG frother can **whip up to 115 ml of milk and heat up to 240 ml of milk**. Thanks to the extra power, it heats the milk to a maximum temperature of 65 ° C in just 130 seconds. The combination of frothing and heating is even shorter due to the smaller amount of fluid, lasting only 80 seconds.

The **double walls** help significantly in maintaining the temperature. Thanks to the non-stick surface, they are also very easy to clean, which will facilitate the overall maintenance of the device.

A helper thought out in every detail

You will be also captivated at first glance by the **minimalist design** and elegant black finish. The manufacturer has stressed every detail, so you can leave the ECG NM 119 frother on the kitchen counter. It will become a tasteful addition to any interior.

The handle ensures safe and especially comfortable handling of the device. Practical indicators inform you about the status of readiness and on / off. The frother is also equipped with the **automatic shutoff** function for safety reasons. You don't have to think about whether they forgot to turn it off when leaving home.
