Kettle that thinks of everything

The **ECG RK 1893 Digitouch** electric kettle will delight even demanding users, who buy their kitchen appliances only with premium equipment. It boasts, among other things, a **double-walled design**, thanks to which you will not get burned by touching it. It also offers the **precise temperature setting function**, so you can prepare various types of tea or baby food with it. And last but not least, it will dazzle you with its beautiful design, crowned with **LED display** and a **touch control panel**.

The interior part of the kettle is made of **high-quality stainless steel**, which boasts excellent durability. This is an appliance that will last you in the kitchen for a long time.

No more burns

If you have a classic electric kettle at home, you may have burned yourself a few times. However, with the innovative ECG kettle, similar hazards are reduced to a minimum. This appliance is equipped with a handy solution to the problem called **COOL TOUCH**, which consists of using **two walls** – the inside one is made of stainless steel with long service life, the exterior is made of plastic. You don't have to worry about an unpleasant burn even when the water in the kettle is boiling. The heat stays inside.

Since our kettle can hold up to **1.7 litre** of water, you can prepare your favourite beverages for extended family or for a large number of visiting friends.

Premium steel as a guarantee of long life

The bottom and inner walls of the ECG RK 1893 Digitouch electric kettle are made of **high-quality stainless-steel SUS 316**, which has many advantages. First and foremost it is the **heat-resistant material** impervious even to extremely high temperatures. It also **greatly resists corrosion** even when in contact with seawater or brine. And on top of it, it is **more resistant to aggressive chemicals** like fatty acids, chlorine or sulphuric acid than other types of steel. Our kettle will pleasantly surprise you with its long service life.

In addition, the stainless steel used inside the ECG kettle is **completely safe**. It contains molybdenum, which prevents excessive metal contamination - its presence is also required in the production of some medications.

It heats the water to exact temperature

You can **set an exact temperature** you want the water heated to, using touch controls and built-in LED display. Thanks to this option, various types of tea as well as other hot beverages can be easily prepared in our double-walled kettle.

Parents will certainly appreciate the **electronic temperature control in 5 steps** (range **40–100 °C**) when preparing baby food. This can be prepared in our kettle exactly as the instructions require. The practical **keeping warm function**, which can be activated for up to 24 hours, also contributes to this fact.

Thinking about your safety

Whether you are preparing your morning tea or preparing a snack for your children, the ECG kettle takes care of your safety. It has among other things a **high-quality STRIX connector with a lifetime function**. It is also equipped with **hidden heating element**. It also has a **360° base**, where you can hide the power cable nicely.

A matter of course is also the **automatic shutoff technology**, which turns off the appliance if it is switched on without water, when it reaches the boiling point or if removed from the base.
